

TASK MANAGEMENT SYSTEM

# TARGPatrol for Cleaning

A Solution for Managing Audits  
and Inspections

# What is TARGPatrol?

TARGPatrol is a cloud-based platform for managing tasks, checklists, rounds, and projects, designed for businesses of any size and industry. It helps streamline workflows, conduct inspections and audits, track progress, and ensure safety at facilities.

## EASE OF USE

---

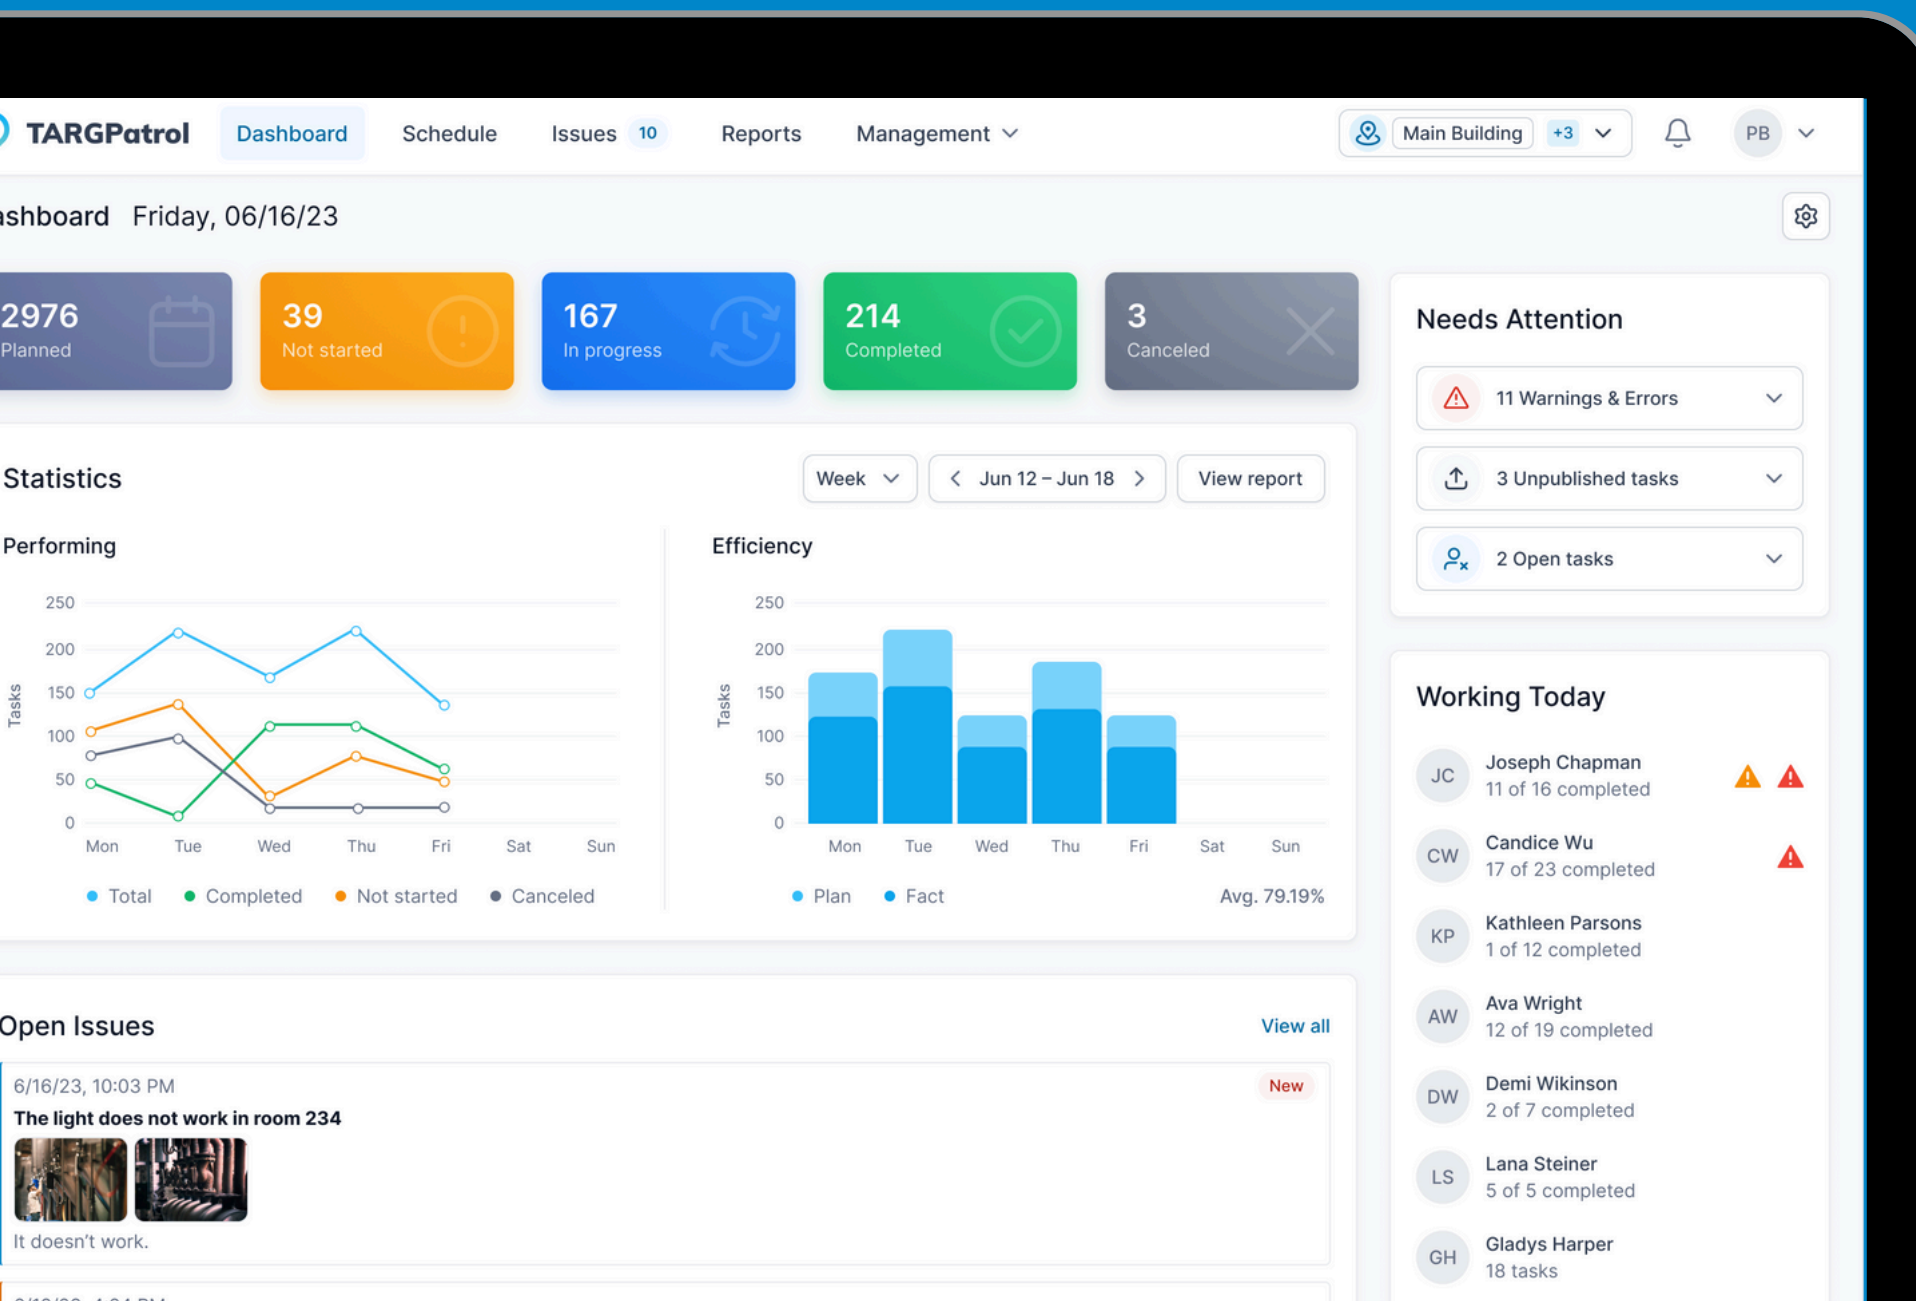

**An intuitive interface and cross-platform accessibility** ensure a minimal learning curve for employees.

## TIMELY MONITORING

---

Administrators and managers can track task completion and incident resolution in real-time.

# Key Features of the System

- Task creation and management of any complexity.
- Use of QR codes, NFC, and GPS for task verification.
- Scheduling tasks and inspections for any period.
- Incident tracking and resolution.
- Checklists with various types of checks.
- Real-time notifications for task updates, issues, or comments.
- Reporting and analytics dashboards to track progress and performance.

# What needs does TARGPatrol address?

---

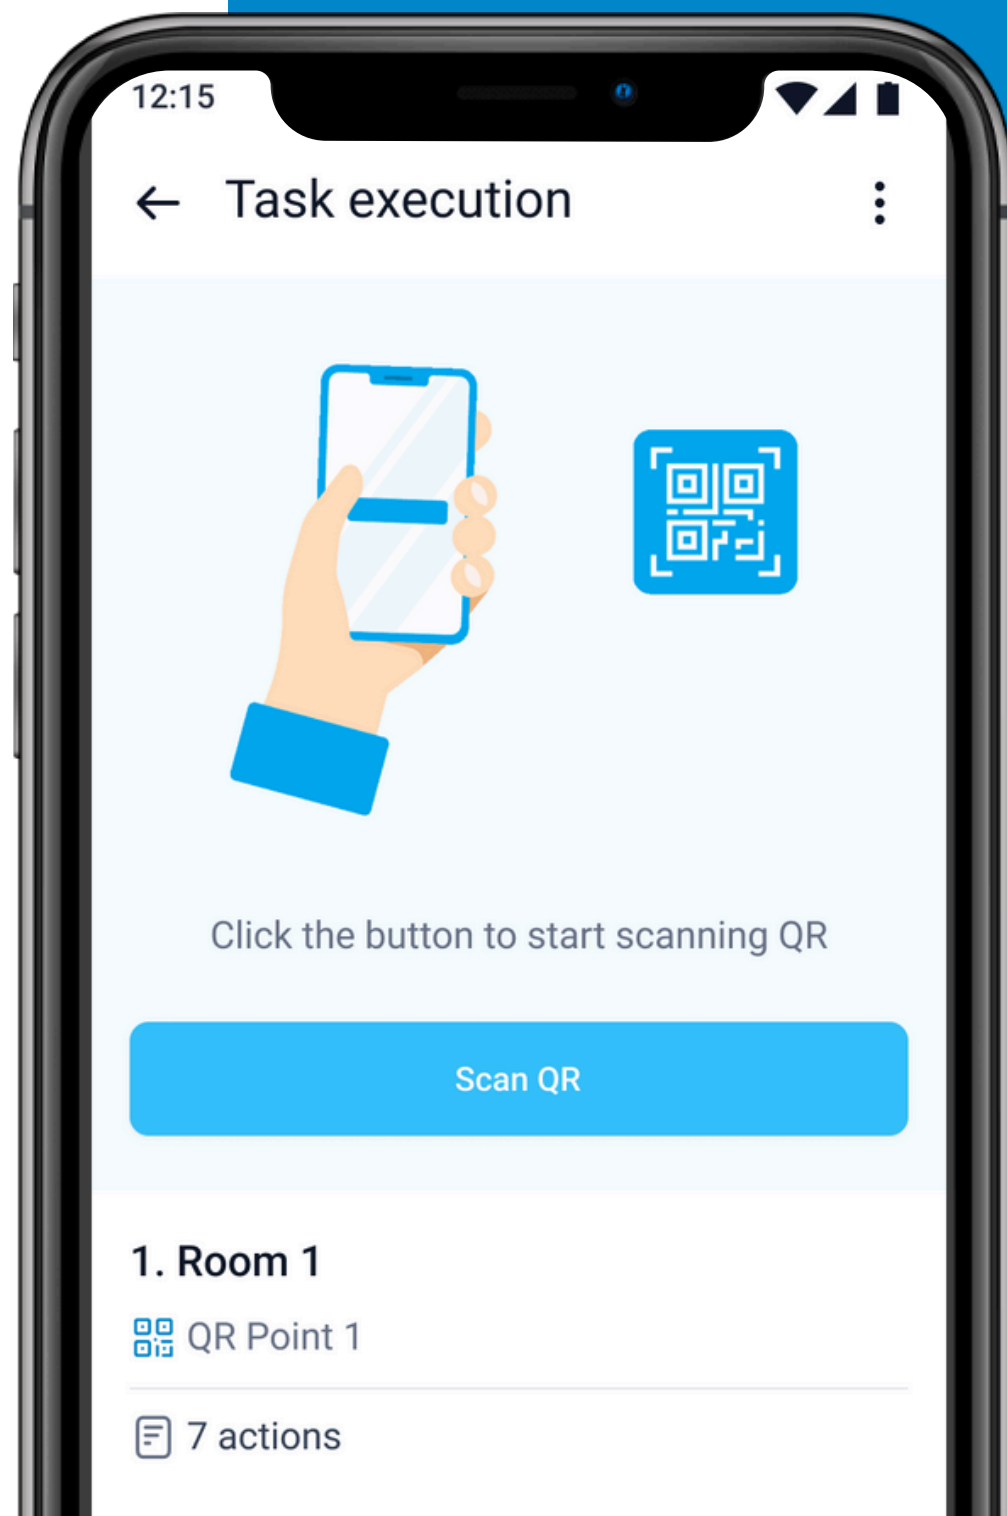

- TARGPatrol **helps effectively manage schedules and tasks** related to cleaning, including assigning checklists, specifying locations, and setting times for task completion.
- Checklists **ensure that employees follow standard procedures**, with the ability to document task completion through photos, videos, or numeric/text parameters.
- TARGPatrol **improves safety** by tracking violations on the premises (errors and warnings).
- The incident reporting feature allows employees to **report issues such as equipment malfunctions or property damage** directly through the app.
- The platform provides tools for generating reports and analyzing data, **enabling performance evaluation**.

# How it works?

- 
- **Creating a team in the system** (administrators and task performers).
  - **Adding locations and points** where employees will perform tasks.
  - **Creating checklists** (if necessary) that the performers will fill out.
  - **Assigning tasks** and creating a schedule.
  - **Employees completing tasks** through the mobile app.
  - **Viewing and analyzing reports** on completed tasks.

# How does it work for the performer?

- **The performer logs** into the mobile app.
- Then, **they select a task** from the list of available ones.
- After starting the task, the employee **follows the specified steps and fills out the checklists.**
- If needed, **they capture the result** with photos or videos.
- During the task, the employee **can add text comments and communicate** with the administrator if any questions arise.
- Once the task is completed, the employee **can review the result and start a new task.**

# Task Execution Monitoring

## WILL HELP WITH TASK TRACKING:

---

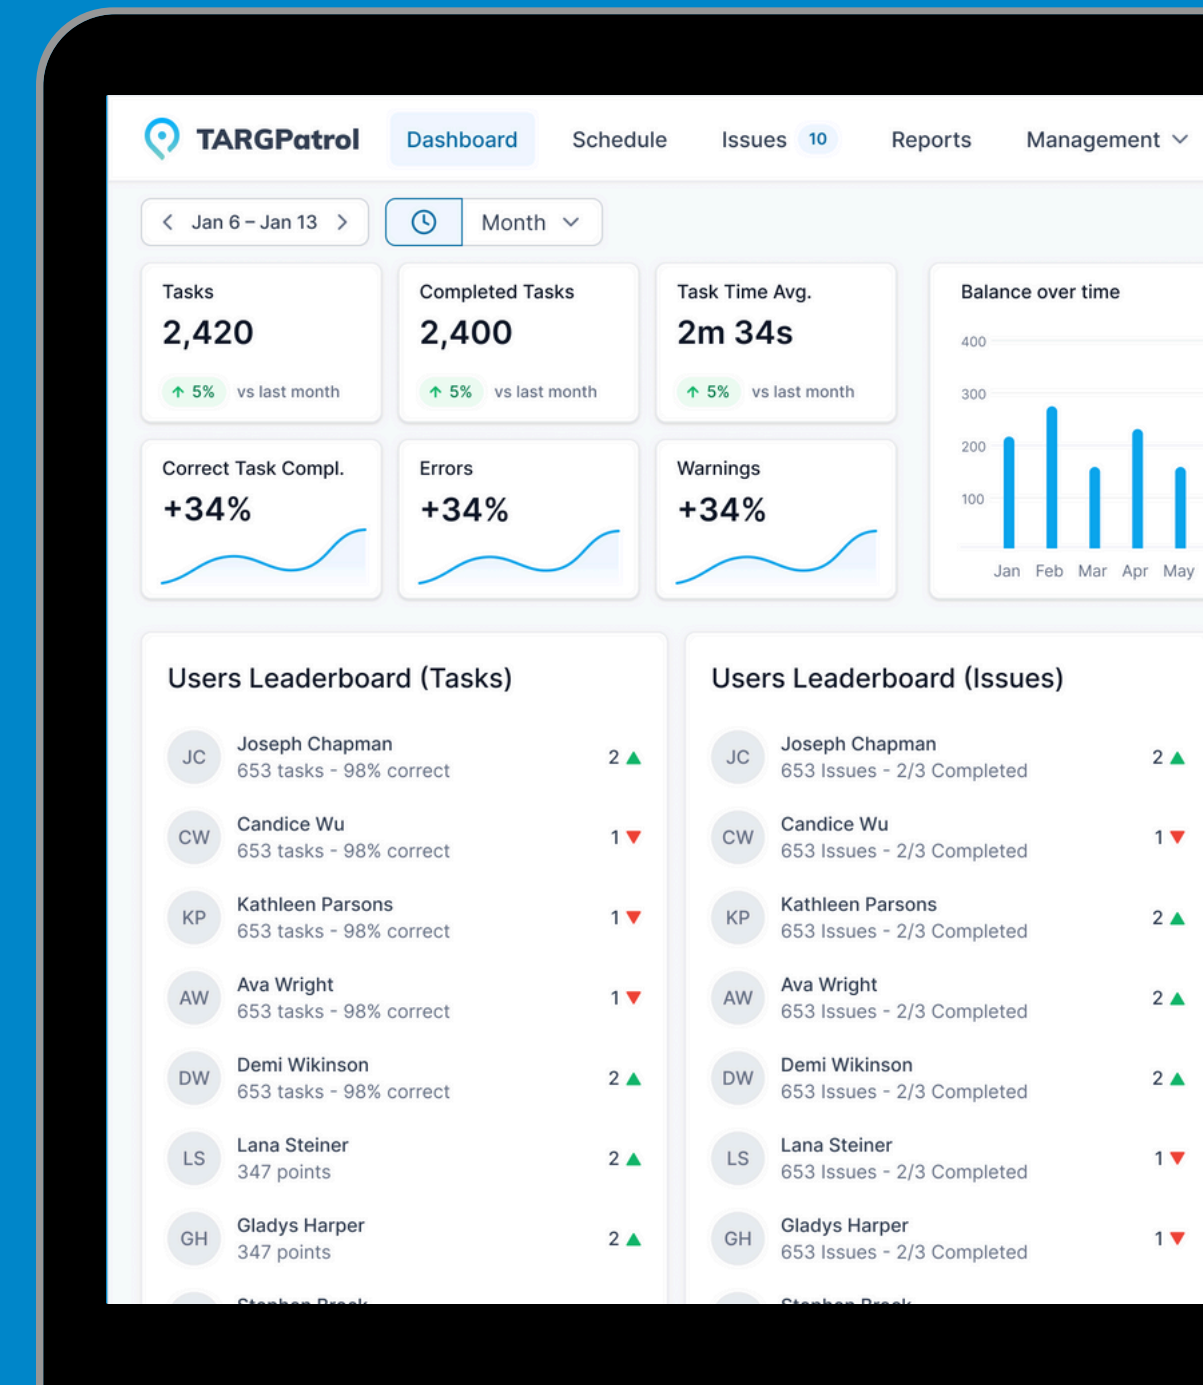

- **Notifications (push, email)** that occur when violations or errors are detected, as well as when comments are left within a task.
- **A schedule** that allows you to **track the progress of tasks in real-time, including completed steps and checklists.**
- **Reports** providing **detailed statistics** on tasks being performed and those already completed.
- **Generation and sending of newsletters** on completed tasks.

# Analytics

## Dashboards, Reports, and Analytics.

- Use **Reports** for different periods to analyze the situation in detail.
- View concise but key information on the **Dashboard**.
- Use the **Analytics** page to explore structured analytics in the form of charts and graphs.
- **Export all data** to other analytical systems.

HOW TO EXPORT DATA TO OTHER SYSTEMS?

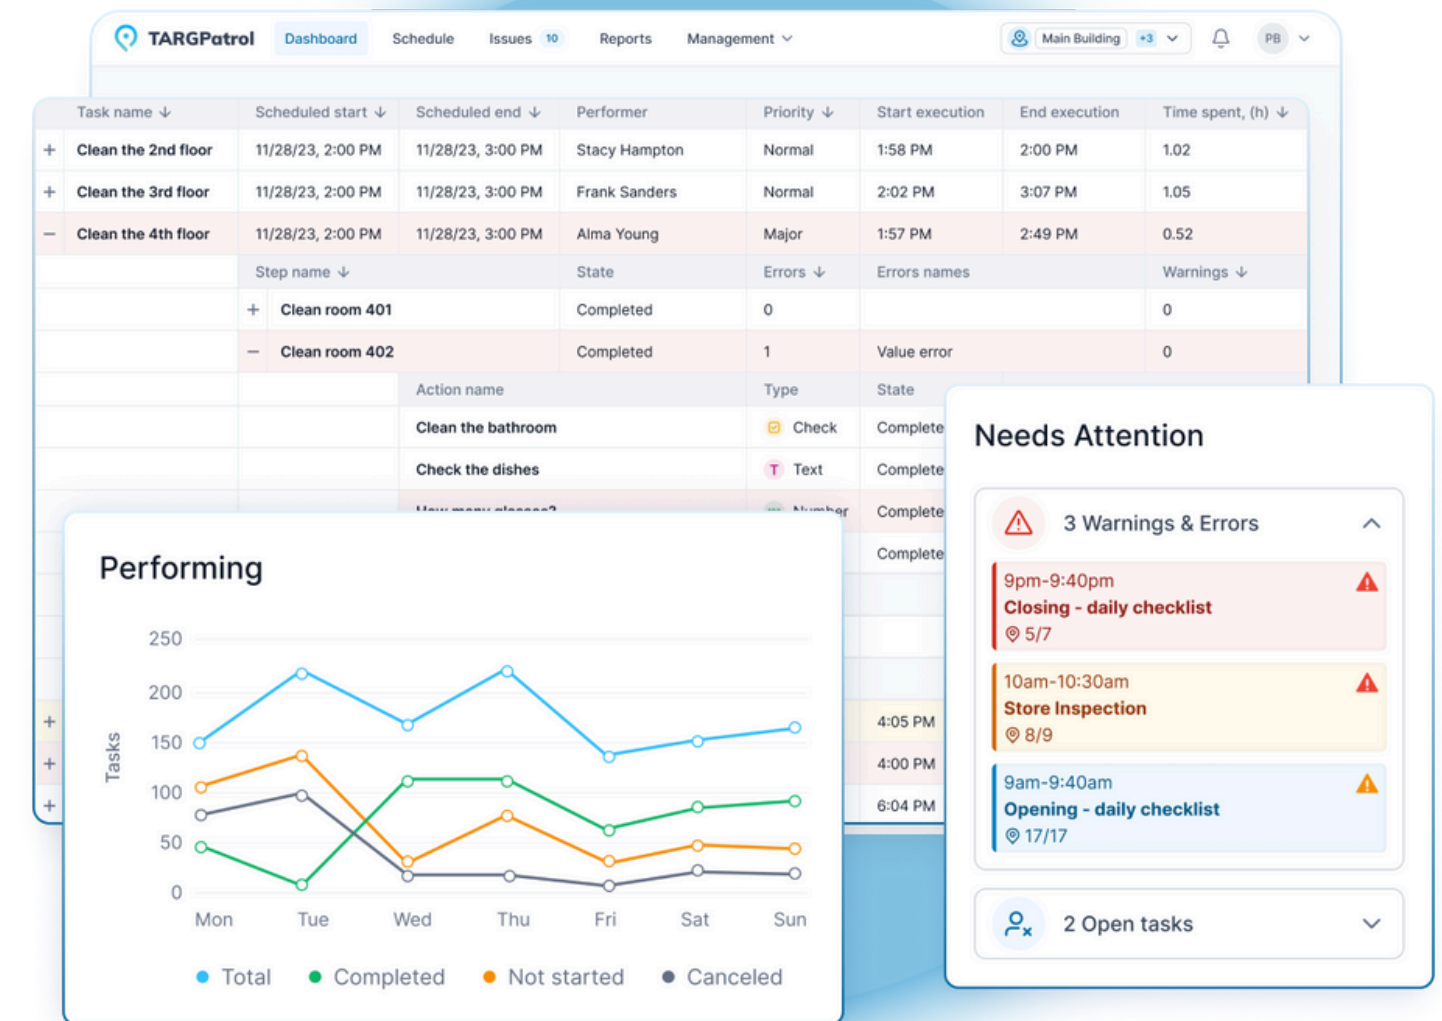

# Integration

TARGPatrol supports an open API and Webhooks, allowing integration with any system and receiving data in a format that suits your needs.

# What will it provide to the business?

- Centralized task management and automated tracking **reduce the likelihood of errors and fraud.**
- Digital inspections and checklists **help maintain high standards and ensure compliance.**
- Task verification and violation registration **increase transparency and accountability among employees.**
- Real-time notifications **enable quick responses to changes and incidents.**
- Analytics and reports provide the ability **to analyze performance, optimize resource allocation, and improve operational processes.**
