

TASK MANAGEMENT SYSTEM

TARGPatrol for Security

A solution for managing patrols,
checklists, and inspections.

What is TARGPatrol?

TARGPatrol is a cloud-based platform for **managing tasks, checklists, patrols, and projects**, designed for businesses of all sizes and industries. It helps streamline workflows, conduct inspections and audits, track progress, and ensure safety at sites.

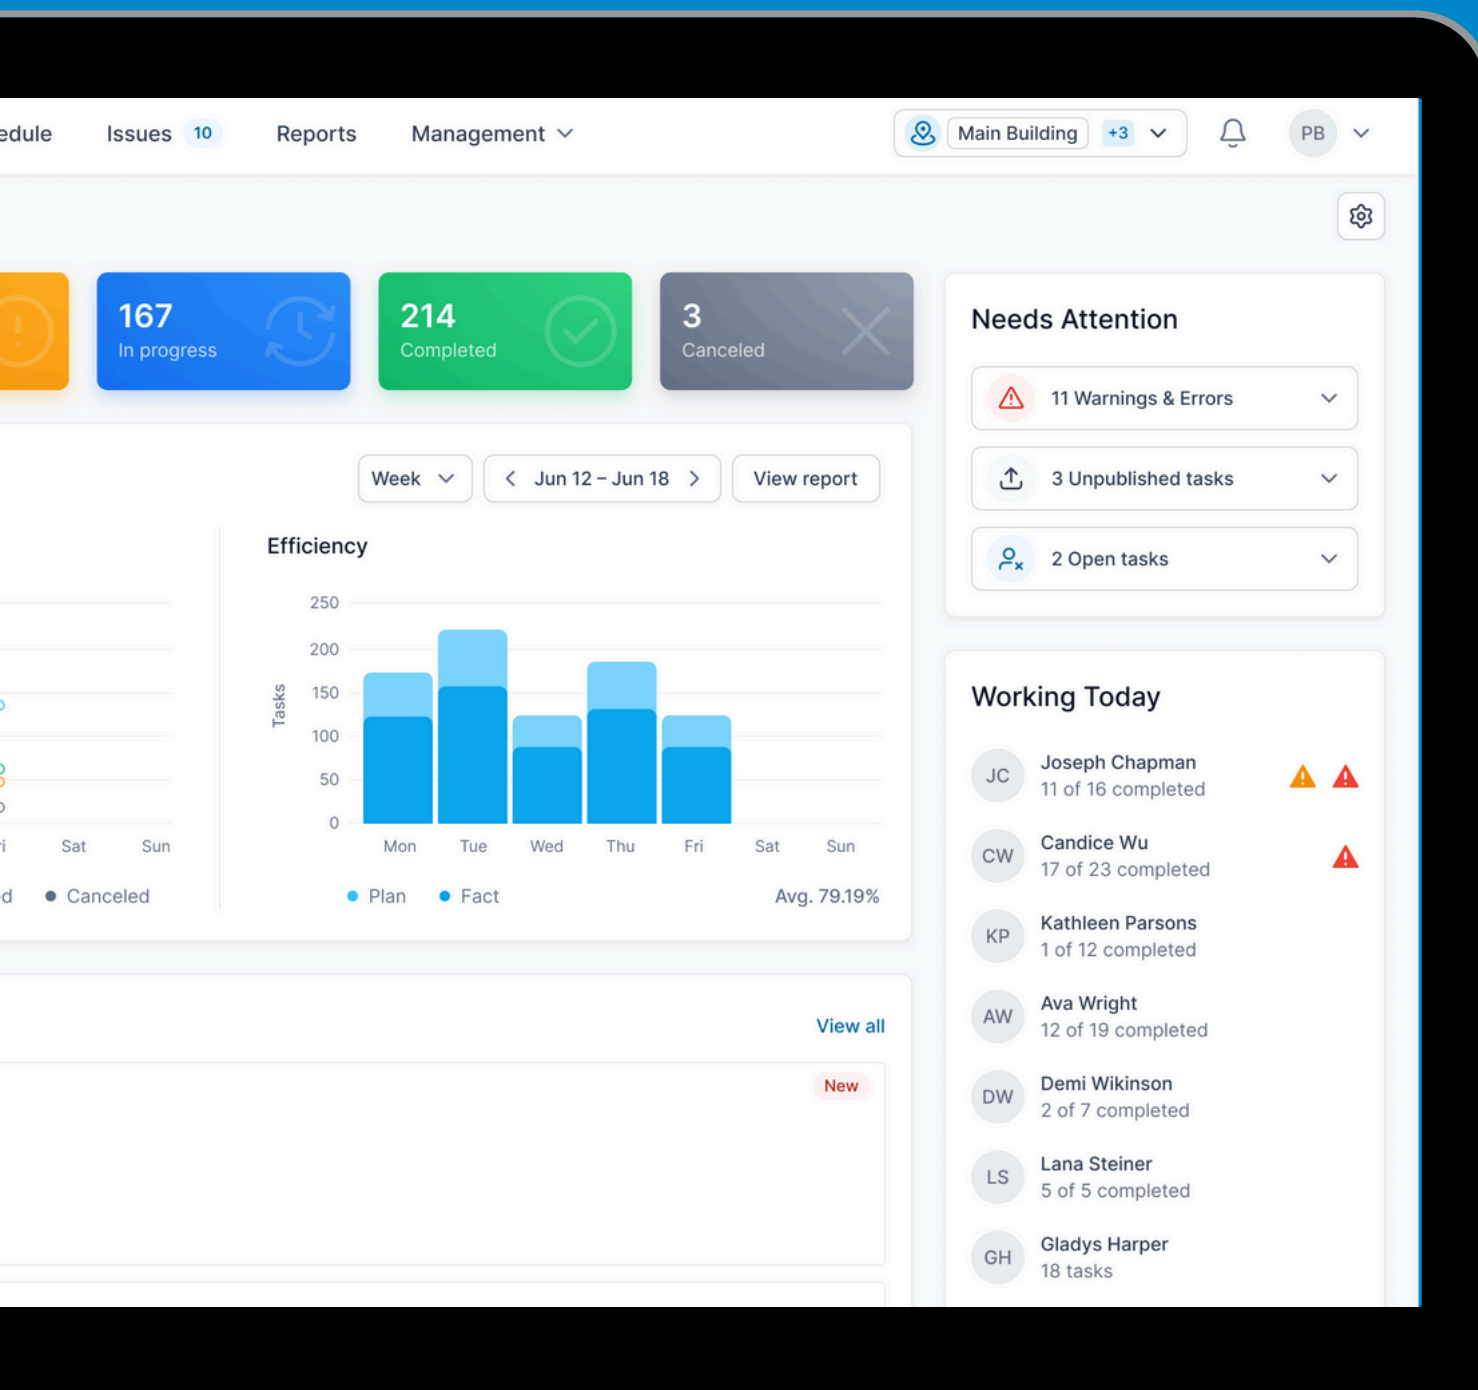

EASE OF USE

An **intuitive interface and cross-platform availability** ensure a minimal learning curve for employees.

TIMELY MONITORING

Administrators and managers can **track patrol completion and incident resolution** in real time.

Key Features of the System

- Task assignment of any complexity.
- Use of QR, NFC, and GPS for conducting site inspections.
- Scheduling of patrols and control for any period.
- Recording violations discovered during inspections.
- Checklists with various types of inspections.
- Incident registration and prompt resolution.
- Analytical dashboards and reports to assess the effectiveness of security measures.

What needs does TARGPatrol address?

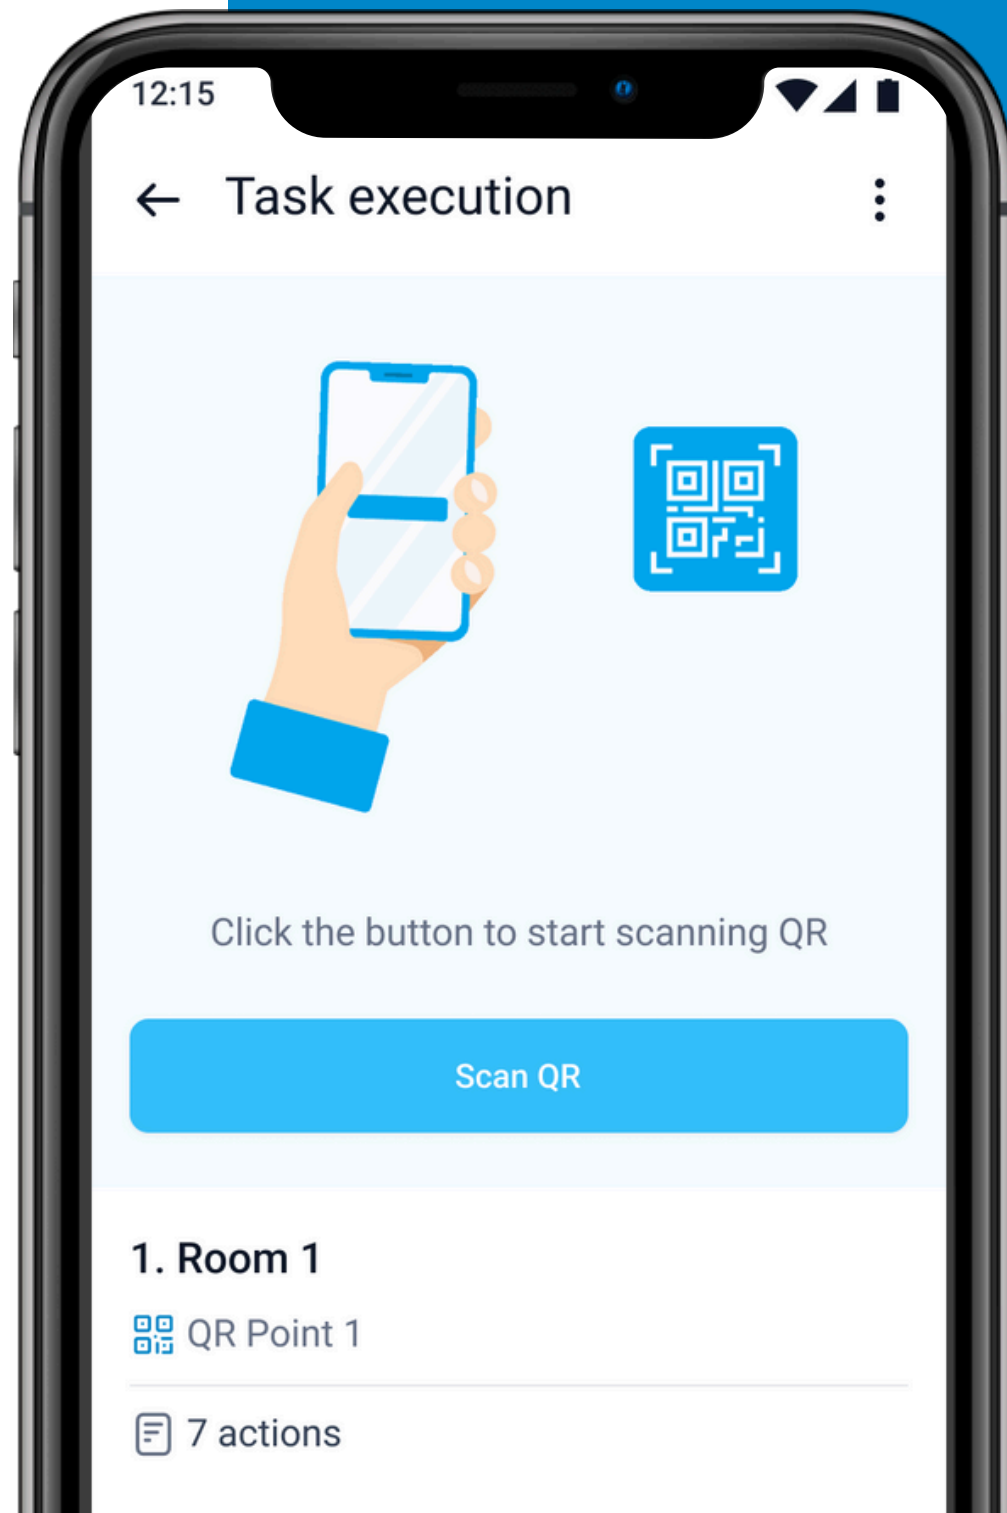

- TARGPatrol **helps efficiently manage security tasks** related to patrols, site inspections, and ensuring safety, including assigning checklists and specifying the location and time of execution.
- Checklists **ensure that security personnel follow standards**, with the ability to confirm task completion through photos, videos, or numerical/text data.
- TARGPatrol **enhances site security by tracking violations** (such as unauthorized access or suspicious activity) within the area.
- The incident registration feature **allows staff to quickly report issues**—such as attempted break-ins, equipment damage, or other threats—directly through the app.
- The platform **provides tools for generating reports and analyzing data**, helping assess the performance of security guards and improve safety processes.

How does it work?

- **Forming a team in the system** (administrators and security guards performing tasks).
- **Adding locations and checkpoints** where employees will perform tasks.
- **Creating checklists** for security guards to fill out during inspections.
- **Assigning tasks and creating schedules** for patrols or shifts.
- **Task execution** by security guards through the mobile app.
- **Viewing and analyzing reports** on completed tasks to assess security performance.

How does it work for the performer?

- **The security guard logs into the mobile app.**
- Then, they **select a task from the list of available ones**, such as patrolling the area or inspecting a site.
- After starting the task, the guard **follows the outlined steps and fills out checklists.**
- If necessary, they **document the result with photos or videos**, such as the condition of the secured area or any violations found.
- During the task, the guard **can add text comments**, such as about suspicious events, and communicate with the administrator if any questions arise.
- Once the task is completed, the guard **can review the result of their work and proceed to the next task.**
-

Task Execution Monitoring

THEY HELP WITH TRACKING TASK COMPLETION:

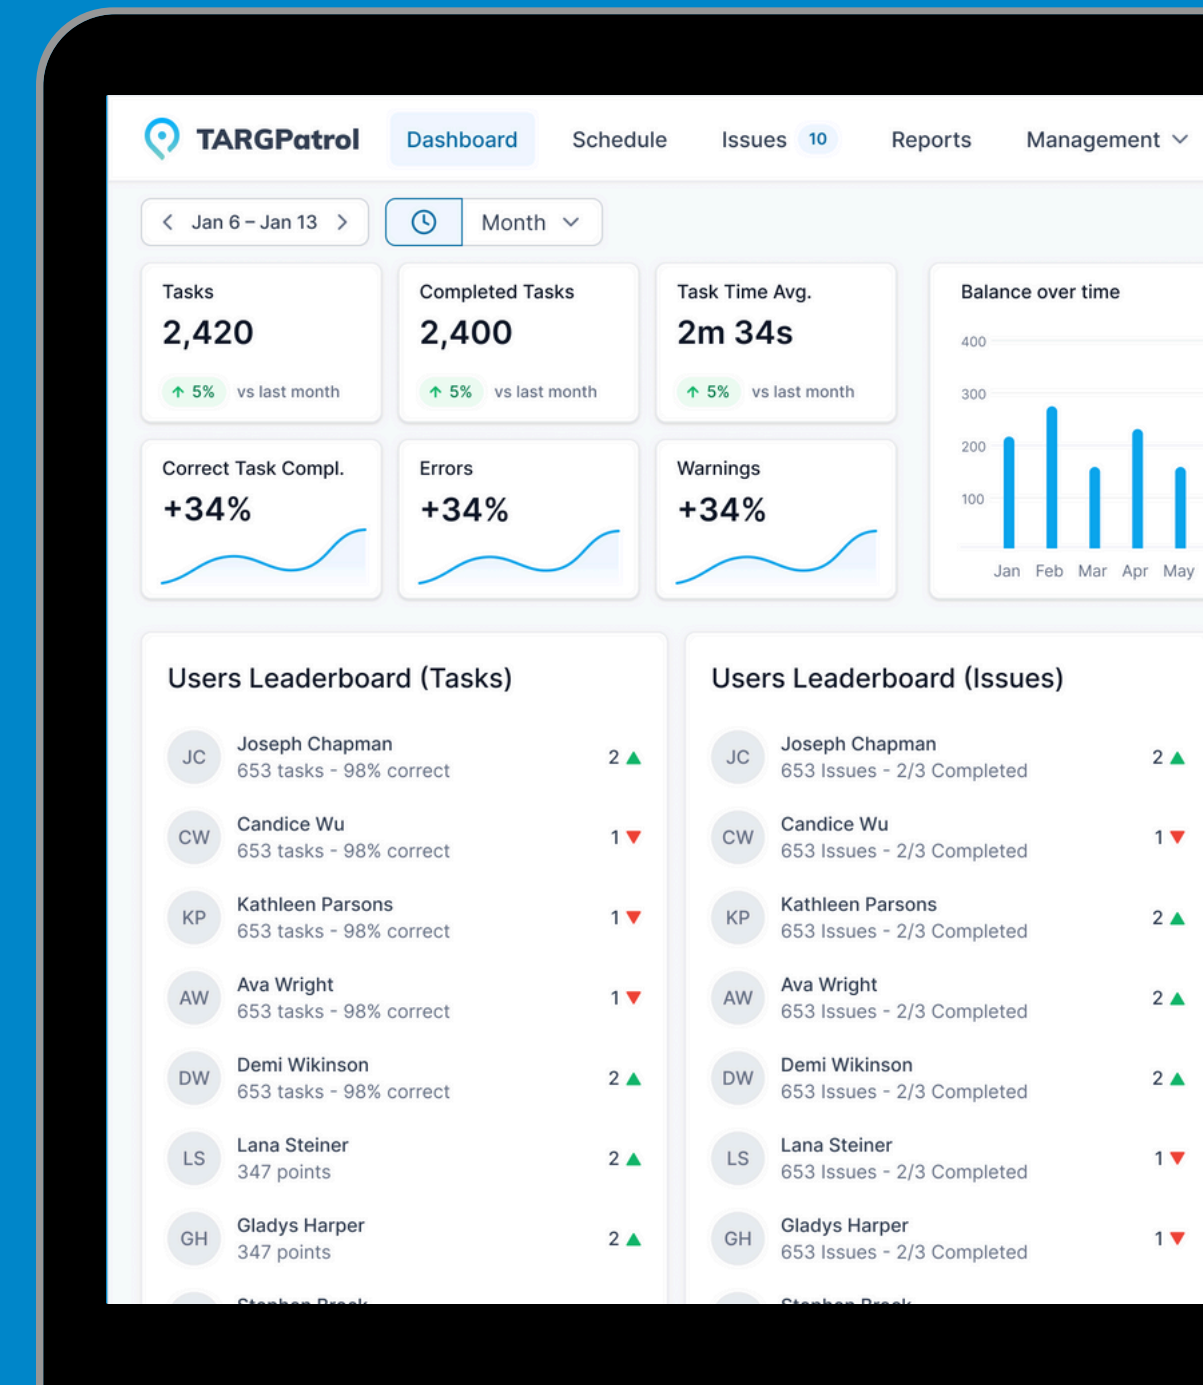

- **Notifications (push, email)** that are triggered by violations or errors found during patrols, as well as when comments are added within a task.
- **A schedule that allows real-time tracking of task progress by security guards**, including completed steps and checklists.
- **Reports providing detailed statistics** on ongoing and completed steps in security operations.
- **Creation and distribution of newsletters** with information on completed tasks.

Analytics

Dashboards, Reports, and Analytics.

- Use **Reports** for different periods to analyze the situation at protected sites, areas, or zones in detail.
- View concise yet key information on the **Dashboard**.
- Use the **Analytics** page to explore structured data in the form of charts and graphs.
- **Export all data to other analytics systems** for further analysis and security improvements.

HOW TO EXPORT DATA TO OTHER SYSTEMS?

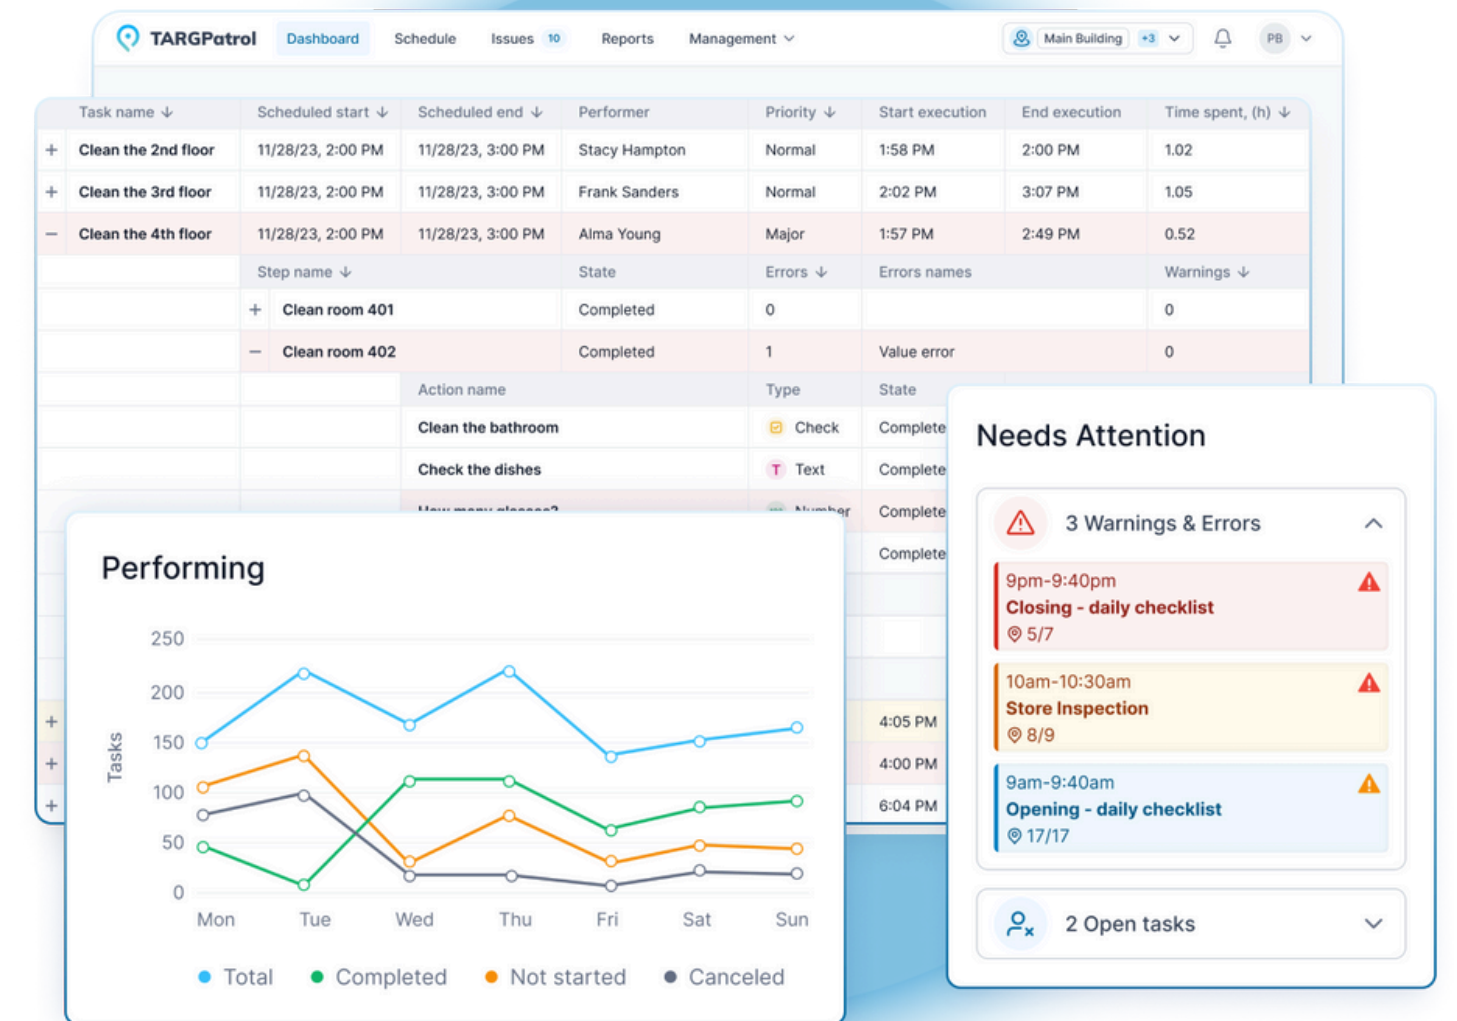

Integration

TARGPatrol supports an open API and Webhooks, allowing it to integrate with any system and receive data in a format that suits your needs.

What will it give to the business?

- Centralized task management and automatic tracking **reduce the risk of errors and oversights in security guard performance.**
- Checklists and inspections **help maintain a high level of security and ensure compliance with security standards.**
- Task execution control and violation recording **increase process transparency and accountability** among security staff.
- Real-time notifications **enable quick responses to changes**, such as attempted break-ins or security system failures.
- Analytics and reports **provide the ability to assess performance and improve security processes** at protected sites.
